

Incorporating Monitoring & Evaluation into Climate Adaptation

Laura Hilberg

Overview of Monitoring & Evaluation

Monitoring

Collecting information to determine:

- How climate change is affecting a system
- Whether/how actions are having a measurable impact on that system

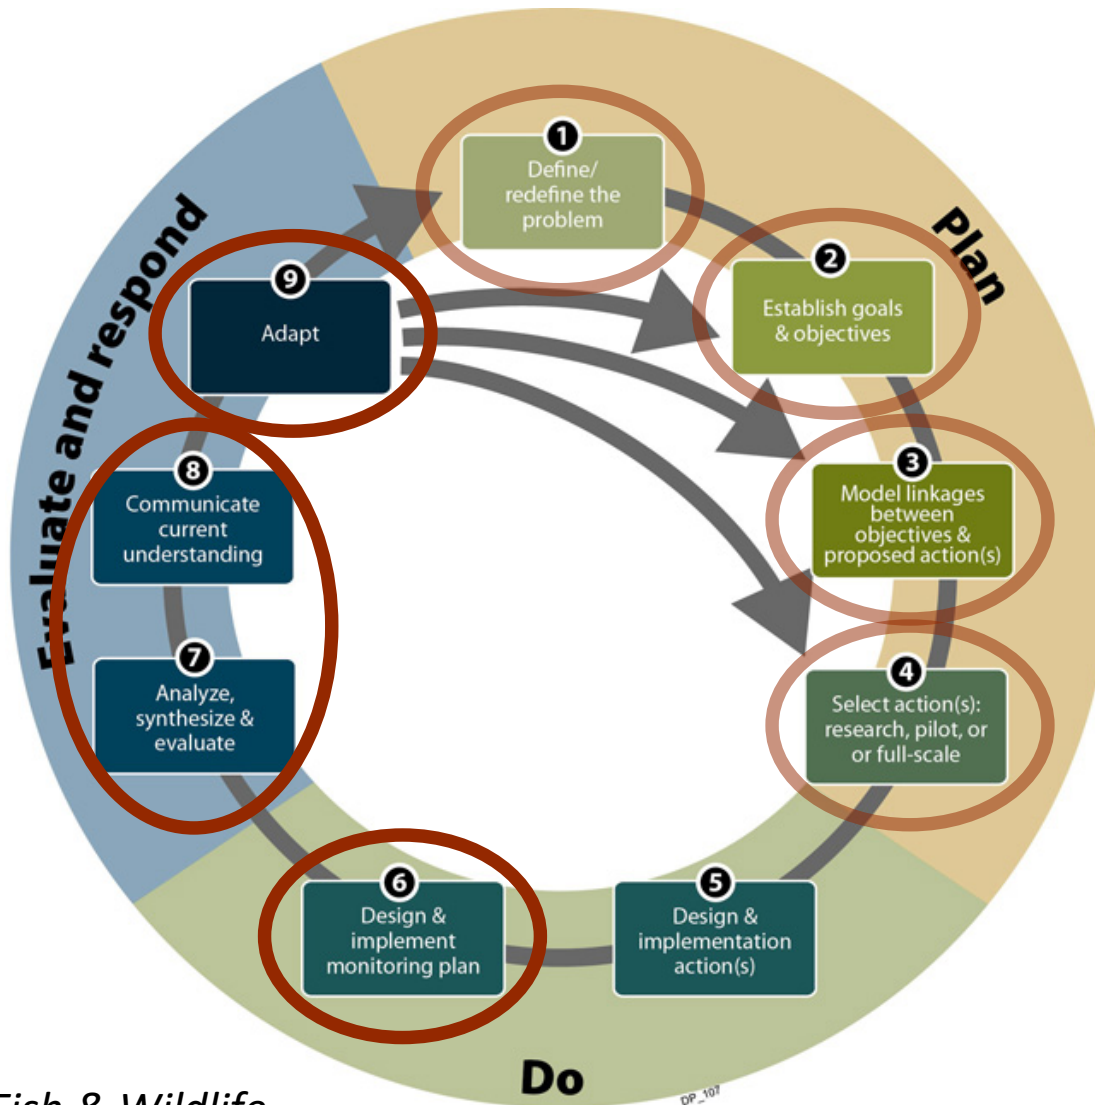

Evaluation

Comparing the expected with the actual outcome to determine:

- Effectiveness
- Efficiency
- Equity
- Accountability

Adaptive Management Framework

Benefits of Monitoring & Evaluation

- Can address multiple goals & stakeholder needs
- Accounts for and/or reduces uncertainty
- Allows early identification of negative consequences
- Efficient use of resources
- Informs recovery efforts after extreme events

Planning for Monitoring & Evaluation

Monitoring

- Evaluate uncertainty and assumptions
- Determine metrics that will identify whether management is effective and meeting other goals
- Develop a monitoring plan

Evaluation

- Develop an evaluation plan
- Create decision points to determine whether expectations are being met
- Determine mechanisms for changes in management

Case Studies & Panel Discussion
